

ClientOpsCRM 2.0.0 Glossary

Account — Organization/company record. May own many contacts and deals.

Activity — Business-facing event in an entity timeline, such as creation, qualification, conversion, stage move or closure.

Actor — Operator/automation identity attached to audit mutations through the CRM connection context.

Audit log — Append-only database record of mutations with actor and JSON before/after evidence where applicable.

ClientOps Relay — Existing 1.2.1 deterministic intake/automation subsystem retained in the combined release.

ClientOpsCRM — Compiled operator-side CRM introduced in version 2.0.0.

Contact — Person record, optionally associated with an account.

Conversion — Transaction that transforms a qualified lead into durable account/contact/deal links and marks the lead converted.

Custom value — Operator-defined key/value attached to an account, contact, lead or deal; key syntax is constrained.

Deal / opportunity — Qualified commercial pursuit that belongs to a pipeline and stage until won/lost.

Dedupe signal — Normalized identity collision presented for review; not every signal is automatically merged.

Doctor — Executable database/invariant health check.

Expected close — Validated calendar date associated with a deal.

FTS5 — SQLite full-text-search extension used by search.

Lead — Pre-opportunity record that may be new, qualified, disqualified or converted.

Minor units — Integer representation of money at two decimal places (e.g. EUR 12.34 → 1234) used to avoid binary floating-point storage.

Normalized identity — Canonical form used for uniqueness/matching, such as lowercase email/domain or digits-only phone.

Owner — Business ownership label stored on the relevant CRM record.

Pipeline — Ordered sales process containing stages.

Probability — Integer 0..100 attached to a stage and synchronized into a deal for deterministic weighted pipeline reporting.

Relay ticket ID — Stable UUID from Relay used as the import identity for a CRM lead.

Stage — Ordered pipeline state with name, probability and kind (open, won, lost).

Task — Follow-up work item attached to one core CRM entity.

Timeline — Ordered activity view for business history; distinct from mutation audit.

Transactional — A multi-step operation that commits atomically or rolls back as a unit.

Weighted forecast — Sum of amount_minor × probability / 100 across open deals; an inspectable arithmetic summary, not a learned predictor.
